

1. Request along with user credentials are sent from the mobile device, e.g. MSCrew mobil application, through the Mobile API cloud service.

2. Mobile API service within MoversConnects communicates with the local Mobile API service running inconjunction with the MoversSuite application to process the request. This request passes through the client firewall.

4. The Mobile API returns the requested data back to the mobile device, e.g. MSCrew mobil application

3. The Mobile API through MoversConnect monitors the MoversSuite API service retrieves the data when available.

Users log in to MSCrew mobile Application with the credentials provided from MoversSuite Personnel Setup.

Configure MoversConnect to access the URL for the Mobile API along with company ID and authentication data.

Configure MoversConnect cloud service to make API calls into local MoversSuite AP. (This means the request goes through your firewall from the World Wide Web.) Setup is done within MoversConnect Setup.

Set user credentials for login access to the mobile device through the Mobile Access tab within Personnel Setup.
